

Eutrophication is the main environmental problem of the Baltic Sea and many inland waters. It is caused by overload of nutrients to the water bodies. One of the fastest and most cost-efficient methods to reduce the nutrient load, that causes eutrophication, is to improve the municipal wastewater treatment processes and build professional capacity of wastewater treatment professionals in the Baltic Sea watershed.

The Union of the Baltic Cities has the honour of inviting you to

Final conference of the project PRESTO
“**Save the Sea – Investing in Waste Water Management
in Belarus**”

11.02.2014, FINLAND

Project on Reduction of Eutrophication in the Baltic Sea Today (PRESTO) combats eutrophication by improving wastewater treatment with concrete investments. PRESTO project has increased the competence of wastewater treatment sector by organizing courses on modern waste water treatment. It has provided a platform to experience exchange and good practices sharing for waste water treatment specialists from Belarus and EU-member countries. Conference will showcase the results of PRESTO project in Belarus and in the Baltic countries and it gives an overview over the current policies of water management sector.

Looking forward to seeing you in Finland in February.

Yours sincerely,

Björn Grönholm,
Head of Secretariat, Union of the Baltic Cities

Deadline for registration is 31.1.2014.
